Howard left for Gyltiken

for repairs propeller has

pieces gone from 2 wings

about 8" on one & 15" on the other

with he claims to have
gotten along side of the
frigate caused by whales
being improperly fast.

on Tues. morning about
4 A.M. on the port side
there was moored the
Rover, astern of her
was a large blue whale
from the Willman fast
with one wire from
tail to bitt aft of blacksmith
shop and laying tail
toward the ship. on
the Starboard side there
was 2 Blue whales and 1
fin whale & Thorvald
one Blue whale with the
blubber taken off was
moored with wire
from its tail to Bitt

just forward of Bridge
and bitts

from its tail to Bitt
just forward of Bridge
and leading forward
with no fastening lines
on head also the
furor whale moored
from same bitt by the
tail and leading aft.
1 Blue whale bay fast
by 3 wires abrest the
working platform

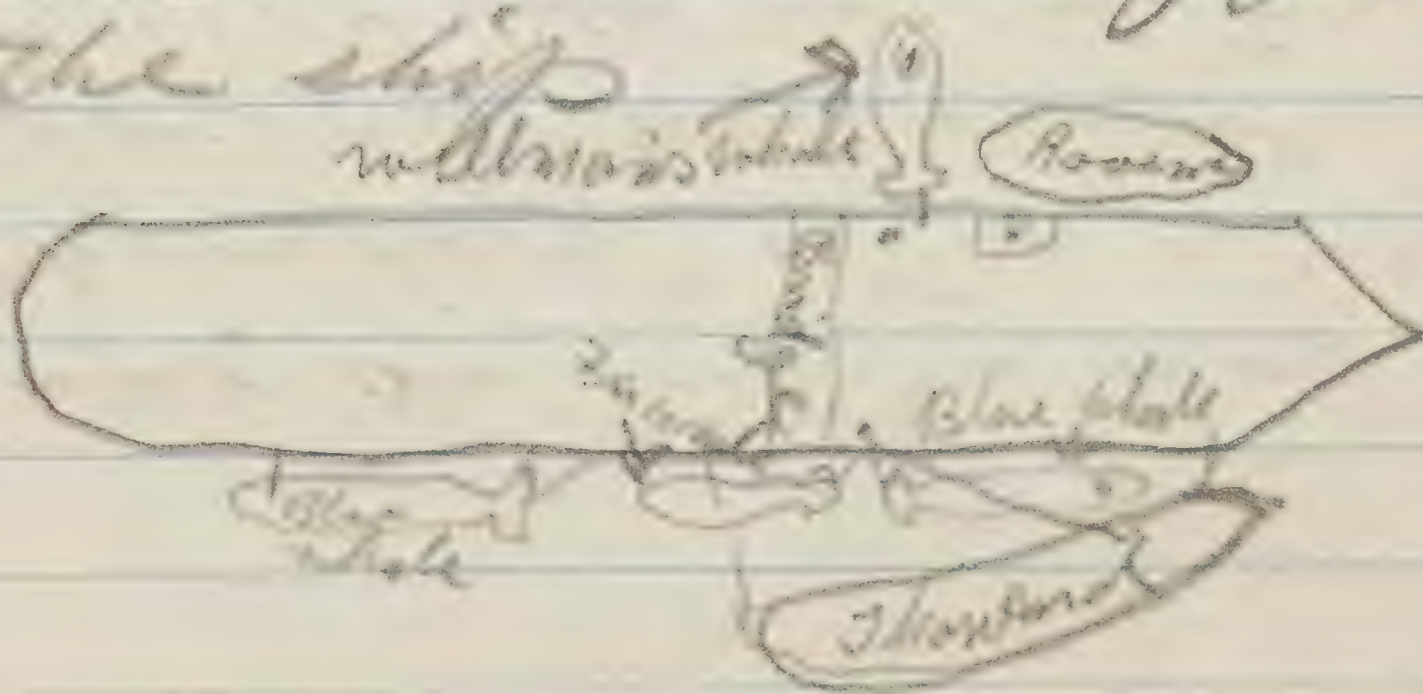

The Thorward was moored
along side of the foreward
Blue whale. I had
orders to move the
ship up under the
ice and to start at
day light as we would
have to go very slow
account of the whales
along side and the
ice was about 3 miles
distant

upon starting the ship
at daylight at very
slow speed (perhaps
2 miles per hour) the
whale between Howard
and Frango slipped aft
while I was watching
the whale on the other
side of the ship, its
tail went between the
ships and the Finn whale
when its tail moving over
became tight its head
forced the Howard off
parting her stern line
and the Finn whale
swung off so the head
of the Blue whale
layed against the

Howard about 30 ft from
it and the tail

Layed against the

Showard about 30 ft from
her stern and the tail
of the Fin whale was
under her stern near
her rudder & propeller
upon discovering that
something was wrong
I stoppt the ship and
rang full speed astern
for about 1 1/2 minutes
to stop our headward
but did not get any
stern way. The crew
of the Showard came
on deck at once and
moved her away from
the ship.
